

Corporate Employee Self-Service (ESS) Portal

MINIMUM VIABLE PRODUCT (MVP) SPECIFICATION

| PROJECT OVERVIEW

The Corporate Employee Self-Service (ESS) Portal is a centralized web-based platform designed to enable employees, managers, and HR teams to handle essential workforce operations efficiently. It automates day-to-day administrative requests to optimize organizational workflow.

| MAIN OBJECTIVE

The main objective of this portal is to reduce HR administrative overhead through automation while providing employees with secure, direct access to their personal records, attendance, and leave management.

| USER ROLES

The MVP system includes the following core roles managed via explicit application permissions:

- **Administrators:** Full platform configuration, system oversight, and log access.
- **HR Executives:** Employee directory governance, high-level reporting, and records management.
- **Managers:** Team attendance validation, operational tracking, and direct leave approvals.
- **Employees:** Profile management, leave application submission, and personal payslip retrieval.

| CORE MVP FEATURES

Employee Dashboard

Users have access to a personalized landing page displaying an attendance summary, active leave balances, company announcements, and quick-action shortcuts.

Leave Management

Employees can submit leave requests, while managers utilize an approval workflow and a shared team calendar to track active absences.

Attendance Tracking

Provides a daily sign-in/sign-out mechanism to monitor daily work hours and compile simple attendance summaries.

Payroll Access

Enables employees to securely view monthly salary breakdowns, tax deductions, and download official PDF payslips.

Employee Directory

A searchable company-wide database displaying contact information, departmental structures, and reporting hierarchies.

| SECURITY FEATURES

The platform enforces role-based access control (RBAC), multi-factor authentication, secure session management, and encrypted data storage to ensure full structural compliance.

| TECHNOLOGY STACK

- **Frontend:** React.js, Next.js, Tailwind CSS
- **Backend:** Node.js, Express.js
- **Database:** PostgreSQL or MySQL
- **Additional Tools:** JWT (Authentication), Cloud Storage for Payslips

| CONCLUSION

The ESS Portal MVP provides organizations with an immediate reduction in administrative paperwork, faster HR turnaround times, and greater data transparency for teams.
