

Enterprise Work Management Platform

MINIMUM VIABLE PRODUCT (MVP) SPECIFICATION

| PROJECT OVERVIEW

The Enterprise Work Management Platform is an advanced, high-scalability operational engine built to centralize portfolio tracking, complex task structures, and cross-team dependencies. It scales beyond basic task boards into a complete enterprise organizational operating system.

| MAIN OBJECTIVE

The main objective of this platform is to orchestrate complex strategic roadmaps, handle cross-project visibility, and automate advanced workflow logic across multiple parallel business units.

| USER ROLES

To support high-governance project mapping, the following multi-tenant roles are supported:

- **Organization Admins:** Global tenant rules, integration configurations, permission architecture, and complete system audit logs.
- **Portfolio Managers:** Multi-project roadmap orchestration, milestone validation, cross-team allocation tracking, and workload metrics.
- **Team Leads:** Backlog management, sprint definition, velocity tracking, and core operational assignment routing.
- **Project Contributors:** Active board manipulation, task updates, documentation drafting, and system notifications.

| CORE MVP FEATURES

Advanced Workspace Architecture

Supports multi-tenant workspace hierarchies, native cross-project visibility, custom project categories, and granular permission inheritance.

Comprehensive Task Hierarchy

Enables nested subtasks, parent-child task relationships, multi-tier priority structures, custom tags, and automated follower/watcher notifications.

Agile Planning Engine

Equipped with configurable Scrum and Kanban boards supporting sprint backlogs, velocity tracking, story point estimation, and real-time burndown charts.

Custom Workflow Engine

Enables administrators to map business rules by configuring custom ticket statuses, transition constraints, and automated status triggers.

Strategic Roadmaps

Provides high-level roadmap tracking, milestone management, and multi-team dependency mapping for executive oversight.

Document & Knowledge Base

Features integrated team wikis with rich text editing capabilities, revision history tracking, and global documentation spaces.

| TECHNOLOGY STACK

- **Frontend:** React.js, TypeScript, Redux
- **Backend:** Node.js, Express.js
- **Database:** PostgreSQL + MongoDB
- **Additional Tools:** Elasticsearch (Global search), Redis (Caching), Socket.IO

| CONCLUSION

This comprehensive MVP delivers a high-governance solution that aligns cross-departmental operations, ensuring complete transparency and agile execution across enterprise portfolios.
